CONTENTS

1.FUNCTIONS & FEATURES

- Module-Type :

MODULE	LCD MODEL	LCD TYPE
DEM 16101 SYH	STN yellow-green	Reflective Positive Mode

- Viewing Direction: : 6° clock
- Driving Scheme   : 1/16 Duty Cycle, 1/5 Bias
- Power Supply Voltage   : 5.0 V
- VLCD Adjustable For Best Contrast   : 4.5 V (typ.)
- Display contents   : 16 x 1Characters (5 x 8 dots, Format: 208 Kids)
- Internal Memory   : CGROM (10,080 bits)
                               : CGRAM (64 x 8 bits)
                               : DDRAM (80 x 8 bits for Digits)
- Easy Interface with a 4-bit or 8-bit MPU
2. MECHANICAL SPECIFICATIONS

- Character Pitch   : 3.75 (W) mm
- Character Size   : 3.20 (W) x 5.95 (H) mm
- Character Font   : 5 x 8 dots
- Dot Size   : 0.60 (W) x 0.70 (H) mm
- Dot Pitch   : 0.65 (W) x 0.75 (H) mm

6.1 PCB DRAWING AND DESCRIPTION
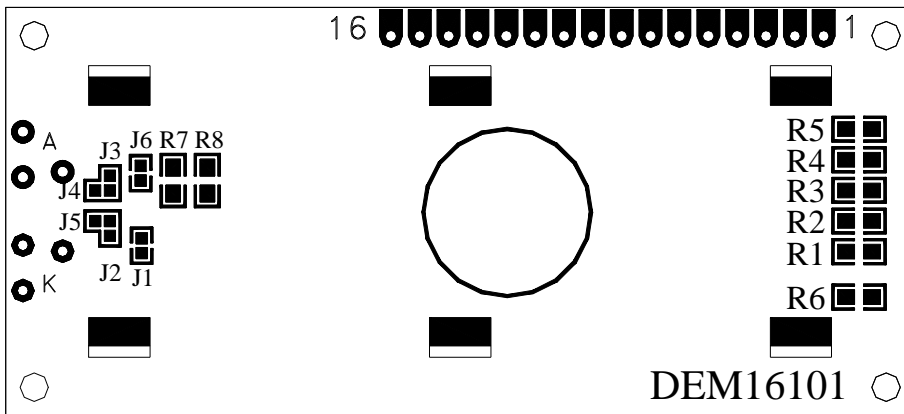

DESCRIPTION: (Not applicable for this version)

6-1-1.The polarity of the pin 15 and the pin 16:

| symbol	symbol state	J3,J5	J2, J4	LED Polarity	
				15 Pin	16 Pin
J2,J4	Each solder-bridge	Each open	------	Anode	Cathode
J3,J5	Each solder-bridge	------	Each open	Cathode	Anode

6-1-2. The metal-bezel should be on ground when the J1 is solder-Bridge.

6-1-3.The LED resistor should be bridged when the J6 is solder-Bridge.

6-1-4.The R7 and the R8 are the LED resistor.

6.2 Example application (Not applicable for this version)

6-2-1. The LED resistor should be bridged as following.

R8

R7

J6
6-2-2. The 15 pin is the anode and the 16 pin is the cathode as following.

12. LCD Modules Handling Precautions

■ The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

■ If the display panel is damaged and the liquid crystal substance inside it leaks out, do not get any in your mouth. If the substance come into contact with your skin or clothes promptly wash it off using soap and water.

■ Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

■ The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarize carefully.

■ To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 -Be sure to ground the body when handling the LCD module.
 -Tools required for assembly, such as soldering irons, must be properly grounded.
 -To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
 -The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

■ Storage precautions
 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps. Keep the modules in bags designed to prevent static electricity charging under low temperature / normal humidity conditions (avoid high temperature / high humidity and low temperatures below 0°C).Whenever possible, the LCD modules should be stored in the same conditions in which they were shipped from our company.

13. Others

■ Liquid crystals solidify at low temperature (below the storage temperature range) leading to defective orientation of liquid crystal or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subjected to a strong shock at a low temperature.

■ If the LCD modules have been operating for a long time showing the same display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. Abnormal operating status can be resumed to be normal condition by suspending use for some time. It should be noted that this phenomena does not adversely affect performance reliability.

■ To minimize the performance degradation of the LCD modules resulting from caused by static electricity, etc. exercise care to avoid holding the following sections when handling the modules:
 - Exposed area of the printed circuit board
 - Terminal electrode sections
